AIM	Create basic charts using Tableau / Power BI / R / Python / D3.js to be performed on the dataset of Ecommerce field • Complete all plots on practice dataset and reproduce on e-commerce dataset. • Basic - Bar chart, Pie chart, Histogram, Timeline chart, Scatter plot, Bubble plot • Calculate Product wise sales, region wise sales • Write observations from each chart
Dataset Particulars	Name: Big Basket Dataset Link: https://www.kaggle.com/datasets/thedevastator/unlock-profits-with-e-commerce-sales-data Dataset Features : 1) This dataset provides detailed insights into Amazon sales data, including SKU Code, Design Number, Stock, Category, Size and Color, to help optimize product profitability 2) Category: Type of product. (String) 3) Size: Size of the product. (String) 4) Date: Date of the sale. (Date) 5) Status: Status of the sale. (String) 6) Fulfilment: Method of fulfilment. (String) 7) Style: Style of the product. (String) 8) SKU: Stock Keeping Unit. (String) 9) ASIN: Amazon Standard Identification Number. (String) 10) Courier Status: Status of the courier. (String) 11) Qty: Quantity of the product. (Integer) 12) Amount: Amount of the sale. (Float) 13) B2B: Business to business sale. (Boolean) 14) Currency: The currency used for the sale. (String)

15) The shape of the dataset is : [120378 * 24]

Analysis

- 1) Fig 1
 - a) We can conclude that sets and kurtas are the most ordered categories, followed by Western Dress
 - b) Dupatta and Saree are the least ordered categories
- 2) Fig 2:
 - a) Sets and Sarees are the most expensive categories on average, while Dupattas and Bottoms are the least expensive
- 3) Fig 3 :
 - a) There is no particular trend in the time span given, but there are occasional spikes on a few days, with the average order value increasing during the vacation period.

	b) There is an overall drop in the total revenue per day, signifying a drop in retention rate 4) Fig 4,5: a) Maharashtra and Karnataka are the two states which contribute to maximum orders b) XS,S,M,L,XL,XXL are the main sizes in majority of the states c) Most states have more kurta orders than set orders 5) Fig 6 a) Maharashtra, Karnataka, Telangana, Uttar Pradesh and Tamil Nadu are the states which contribute the most to the total order value b) North-East India, and Union Territories are the lowest contributors to the total order value.
Suggestions	1) Reduce SKUs and focus on the 5 best selling ones 2) Keep higher stock of Sets, Kurtas and lower stocks of the rest 3) Stocks in each state should be calculated on the basis of ratio of each category sold in that state 4) XS,S,M,L,XL,XXL should have stocked up inventory, all other sizes can be inventory-light and custom made 5) Focus on expanding in Maharashtra, Karnataka and drive up average order value 6) Take measures for customer retention 7) Push for offers during holiday season to drive up sales
Conclusion	By studying the visualizations in the dataset above, I was able to analyze the trends in Fashion on Amazon and come up with suggestions for improving service and revenue.
